Accurate materials data is essential to legal compliance

DXC Compliance Data eXchange

Information on materials in the supply chain must comply with legal requirements. DXC CDX is your answer to compliance, efficiency and quality.

Requesting and evaluating information on materials from the supply chain is essential to an organization’s efficiency and quality. It’s also vital to managing and reporting hazardous substances, which are required to meet legal requirements that vary by region and country. In addition, risk management requires reliable data for material risk assessment.

Cost efficiency influences procurement and production processes, and recycling and scrapping. This requires additional data and transparency about supplied products. An increase in turnover involves a new approach to sustainability. Minimizing disposal risks with adequate documentation and avoiding problematic product contents help ensure a positive corporate image and stable brand value.

To do all of this, turn to DXC Compliance Data eXchange (CDX). With it, you can create and exchange standardized material data sheets (MDSs) and conflict minerals declarations (CMDs).

Functionalities of CDX services

Embedded workflow management
Through your DXC CDX inbox and outbox, you can forward MDSs and CMDs quickly and transparently to your customers and suppliers. It all starts with an email process to invite companies that are not yet registered in CDX. The bulk mailing feature gives you the additional option to send inquiries to several suppliers in one transaction. CDX supports integration into your enterprise resource planning and product lifecycle management systems by means of web services and data exchange between itself and the International Material Data System (IMDS), ensuring high-quality, timely and accurate reports.

Analyses and reports
With DXC CDX, you can analyze an individual MDS, several in-house MDSs or several suppliers’ MDSs according to the source and disposition statement. You can also create an MDS report, which provides an overview of the entire MDS, including all ingredients and regulations. The CMD quality report lets you check yours with predetermined or self-defined quality profiles. It calculates data quality and monitors quality improvement. Results can be exported or displayed in graphics and statistics. After, you can send email notifications to suppliers when the supplied CMDs do not fulfill data-quality expectations.

Substance and material management
A centrally provided catalog for substances and materials ensures data quality in DXC CDX. There are 10,000+ standard metals with compositions and norms, and also standard material and chemical pure substances.
It serves as confirmation of the legal specifications or other proprietary provisions agreed on between you and your supplier.

**Partial declaration** — Material declaration based on a list of substances — Your organization defines the disclosure level of certain substances. If these form part of the product, the material declaration identifies all substances with a certain proportion that you may have a special interest in.

**Full-material declaration (FMD)** — All substances for producing products are registered and disclosed. All legal and proprietary provisions must be shown. By means of “joker” substances, which are relevant for certain companies, they can be anonymized or marked as confidential. The exceptions are legally restricted or prohibited substances or those subject to declarations.

**SAP** — In cooperation with SAP®, DXC developed an interface to exchange data, which is supported by both systems.

**IMDS CM Analyzer** — This enables IMDS users to analyze suppliers’ existing MDSs — with regard to conflict minerals, and prepare and automatically send inquiries to them by connecting to the CDX system. Suppliers are requested to make CMDs available in CDX.

**IMDS MDS Import** — This enables IMDS users to import MDSs from our IMDS into CDX as own MDSs in edit mode to enable the user to rework or complete the existing data sheet with CDX-specific information.

**The best solution**

Turn to DXC Technology. With DXC Compliance Data eXchange you can standardize, create and exchange MDS and CMD, comply with legal requirements and increase your efficiency and quality.
