

DXC Compliance Data eXchange

Accurate materials data is essential to legal compliance

Information on materials in the supply chain must comply with legal requirements. DXC CDX is your answer to compliance, efficiency and quality.

Insights

- Standardize MDS and CMD creation and exchange.
- Minimize risk associated with managing and reporting hazardous materials.
- Increase cost efficiencies with procure and production processes.
- Do all this with DXC CDX.

Requesting and evaluating information on materials from the supply chain is essential to an organization's efficiency and quality. It's also vital to managing and reporting hazardous substances, which are required to meet legal requirements that vary by region and country. In addition, risk management requires reliable data for material risk assessment.

Cost efficiency influences procurement and production processes, and recycling and scrapping. This requires additional data and transparency about supplied products. An increase in turnover involves a new approach to sustainability. Minimizing disposal risks with adequate documentation and avoiding problematic product contents help ensure a positive corporate image and stable brand value.

To do all of this, turn to DXC Compliance Data eXchange (CDX). With it, you can create and exchange standardized material data sheets (MDSs) and conflict minerals declarations (CMDs).

Functionalities of CDX services

Embedded workflow management

Through your DXC CDX inbox and outbox, you can forward MDSs and CMDs quickly and transparently to your customers and suppliers. It all starts with an email process to invite companies that are not yet registered in CDX.

The bulk mailing feature gives you the additional option to send inquiries to several suppliers in one transaction. CDX supports integration into your enterprise resource planning and product lifecycle management systems by means of web services and data exchange between itself and the International Material Data System (IMDS), ensuring high-quality, timely and accurate reports.

Analyses and reports

With DXC CDX, you can analyze an individual MDS, several in-house MDSs or several suppliers' MDSs according to the source and disposition statement. You can also create an MDS report, which provides an overview of the entire MDS, including all ingredients and regulations.

The CMD quality report lets you check yours with predetermined or self-defined quality profiles. It calculates data quality and monitors quality improvement. Results can be exported or displayed in graphics and statistics. After, you can send email notifications to suppliers when the supplied CMDs do not fulfill data-quality expectations.

Substance and material management

A centrally provided catalog for substances and materials ensures data quality in DXC CDX. There are 10,000+ standard metals with compositions and norms, and also standard material and chemical pure substances.

Figure 1. CDX supports numerous legal regulations and ordinances¹

¹ REACH (XIV and XVII), SVHC, RoHS (with exceptions), IEC62474, conflict minerals, batteries, packaging, ELV, GADSL, and HKC, and integration of user-defined substance lists.

The process as ideally envisioned for the complete value chain

Embedded CMD Manager

Conflict Minerals Declaration (CMD) Manager supports creating a CMD report. The latest CM reporting template — with import and export functions — is provided in the CDX system. You can also work with already-published RMI CMR templates and add other information, such as certificates, in attachments. Already accepted and sent MDSs can be attached to a CMD.

DXC Compliance Data eXchange maps material composition based (partial) products or the entire assembly, adhering to the European Union REACH regulation — once an article, always an article.

A new assistant feature — Regulation Wizard — facilitates creating an MDS structure. It guides you through the supported legal regulations and simplifies provisioning of the required substances to create an MDS.

Declarations supported

One-level declaration — The supplier confirms — in a declaration of conformity

— that the concentrations in a specified material, component or assembly group do not exceed the permitted maximum values of the defined substances. It serves as confirmation of the legal specifications or other proprietary provisions agreed on between you and your supplier.

Partial declaration — Material declaration based on a list of substances — Your organization defines the disclosure level of certain substances. If these form part of the product, the material declaration identifies all substances with a certain proportion that you may have a special interest in.

Full-material declaration (FMD) — All substances for producing products are registered and disclosed. All legal and proprietary provisions must be shown. By means of “joker” substances, which are relevant for certain companies, they can be anonymized or marked as confidential. The exceptions are legally restricted or prohibited substances or

those subject to declarations. Other functions in cooperation with DXC Partners and IMDS

SupplyOn — By using single-sign on (SSO), SupplyOn suppliers are automatically embedded in the CDX system.

SAP — In cooperation with SAP®, DXC developed an interface to exchange data, which is supported by both systems.

SCIP — CDX supports automated mass submissions of SCIP Dossiers to the ECHA portal. SCIP Simplified Notification (SSN) and Referencing are as well in scope.

IMDS MDS Import — This enables IMDS users to import MDSs from IMDS into CDX – either manually for selected MDSs or as mass replication – to leverage their existing IMDS information.
