

DXC CDX Responsible Materials Declaration (RMD)

## Manage Responsible Sourcing changes easily and efficiently

Maintain materials sourcing in an ethical and compliant manner, respecting the local communities and environment, while reducing risk of supply chain disruptions and increasing brand value.

The landscape for identifying and managing Responsible Materials sourcing is changing. Conflict minerals have been a topic of public concern for years, yet newer EU regulations, unacceptable cobalt and mica sourcing work conditions, and other expanding reporting obligations for material sourcing create significant challenges. To keep pace with these changes, the CDX Responsible Materials Declaration (RMD) Manager tool has adopted a set of best practices designed to keep our customers at the leading edge of developments and ensure they are understanding the impact on their supply chains.

### Streamline Compliance with CDX

The RMD Manager will allow you to transform your product data collection from manual processes to modern technologies and integrated solutions in a cost-effective manner. CDX reduces the cost of existing processes, speeding execution and improving collaboration across the supply chain.

The CDX mission is to provide the most effective and efficient solution across multiple industries. Our service is designed and priced with a flat annual fee, taking away guesswork. There are no set-up fees, no long-term contracts, or penalties to worry about - just an all inclusive package that covers everything your compliance program needs.

### CDX Builds Business Intelligence into supply chains

3TG, cobalt and mica and other materials are all at risk of being sourced irresponsibly. If your company relies on 3TG, mica and cobalt – you need to avoid sourcing from conflict afflicted or high-risk areas. The RMD Manager is an innovative, robust, secure, cloud managed solution which allows your company to produce accurate and consistent Conflict Minerals and Extended Materials declarations to share with others.

### Mitigate Supplier ESG Risks

Supply chain management constitutes a financially material ESG risk. It's more important than ever before to have trusted partners within the supply chain. Do you have a clear picture of where materials in your production process originate? If not, you could be creating significant business risks for your company and its stakeholders. To avoid negative impact on reputation and brand value, companies must understand the potential impacts of their supply chains on human rights abuses, labor standards, compliance, and other value drivers. CDX will help you meet those goals and empower you to find an opportunity to improve corporate visibility with customers and build trust through transparency.

## With CDX RMD Manager

- Securely import and export RMI declarations via the value chain
- Choose services based on a flat annual fee, with no set-up fees or extra cost
- Integrate with your in-house systems
- Maintains automated RMI updates for RMI smelter and refiner statuses
- Provides quantifiable metrics for due diligence and continuous improvement effectiveness
- Ability to solicit, receive, send, rollup, validate RM (Responsible Material) Declarations
- Validate due diligence with comprehensive smelter analysis
- Centralized cloud service built to deliver simultaneous updates to all customers
- Consult our compliance experts and legal advisors
- Ask question to our multilingual customer and supplier support

## Reduce your exposure to Non-compliance

CDX's Responsible Materials solution addresses 3TG, cobalt and mica and provides powerful Business Intelligence analysis tools. These tools allow clients to identify potential high-risk areas in their supply chain quickly. The analysis features extend client awareness to mitigate regulatory and ESG risks associated with responsible materials.

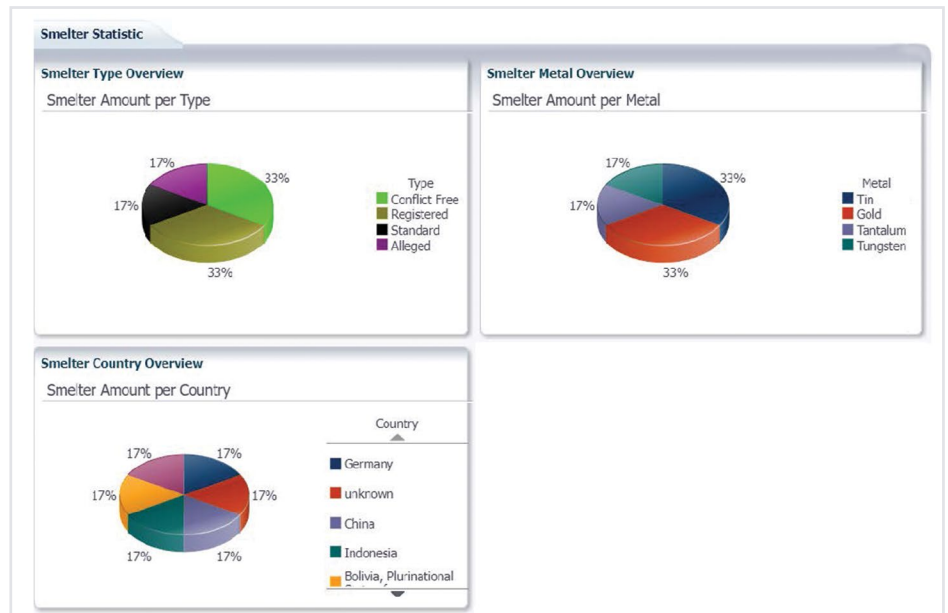

## Further increase Data Quality

If you want to further increase your data quality, turn on the in-depth RMD Quality Profile Analyzing Tool. This tool analyzes your RMDs with provided or client-defined quality profiles. It monitors data quality and continuous improvement, and can be exported or displayed in graphics and statistics.

## Avoid Regulatory, Commercial and Reputational Risk

Integrating the RMD Manager into your compliance program will empower you to design and develop an effective due diligence program.

Use RMD Manager to track your integrity and verify your products are produced sustainably and ethically.
