

DXC Compliance Data eXchange (CDX)

Embrace CDX - Unlock new possibilities beyond IMDS

Are you ready to take your automotive business to new heights of compliance excellence?
Unlock your business's full potential with CDX!

In today's ever-changing regulatory landscape, compliance serves as the solid foundation on which businesses across various industries rely. If you are already an experienced user of the International Material Data System (IMDS), you likely recognize its significance within the automotive sector. Now, it's time to broaden your perspective. This is where Compliance Data eXchange (CDX) comes into play, offering functionalities and advantage beyond what IMDS can provide.

Expanding Compliance Horizons

IMDS is designed exclusively for the automotive sector, while CDX serves as a versatile platform connecting different industries. CDX not only expands compliance horizons by accommodating additional regulations but also assists in crafting a robust compliance strategy tailored to your needs.

Streamlined Compliance Management

In a dynamic and constantly evolving regulatory landscape, CDX ensures comprehensive compliance with both global regulations and industry-specific standards. Moreover, CDX provides tools for managing your company-specific regulations, facilitating confirmation requests from suppliers. You can also leverage a query list featuring yes/no questions to gain a deeper understanding of your suppliers' compliance.

Effortless IMDS to CDX Data Transfer

If you've already collected data in IMDS, there's no need to gather it again. You can seamlessly import this data into CDX and use it as a baseline for future data collection processes. This not only streamlines your workflow, saving you time, but also significantly reduces the risk of manual input errors, resulting in increased precision and overall operational efficiency.

Integration and Transfer

You can rely on CDX to seamlessly integrate your data with standard interface formats like the IPC/IEC schema, eliminating the complexity of managing multiple product data systems from your suppliers. With CDX, you can generate reports that provide a comprehensive overview of your products and create declarations that not only validate your compliance but can also be easily shared with your customers to clarify the presence of specific substances.

Security Measures

CDX is committed to your security, providing a secure infrastructure to protect your operations and data. With over 10 years of trust, CDX shares its security principles with IMDS. We are continuously evolving our security features in CDX. Extra security layers like Multi-Factor Authentication (MFA) and Single Sign-On

Insights

- **Efficiency in Compliance:**
CDX streamlines cross-industry compliance, leveraging existing IMDS data, saving time, reducing complexity, and enhancing accuracy.
- **Proactive Regulation:**
CDX keeps you ahead of evolving rules, ensuring instant compliance, minimizing non-compliance disruptions.
- **Risk Mitigation:**
CDX prevents Terms of Use (TOU) violations by offering tailored compliance for non-automotive products beyond IMDS scope.
- **Comprehensive Data:**
CDX captures data beyond IMDS limits, safeguarding against accidental non-compliance.

Ensure the INTEGRITY of your data and stay compliant with your supply base using CDX.

(SSO) have been added for enhanced identity verification when accessing your CDX accounts and sensitive information, ensuring your data's security.

Integrated workflow management

At CDX, we recognize the importance of having accurate data and involving suppliers before making any request. We offer the flexibility to adjust your quality standards and checks according to your needs. In CDX, you can choose your preferred declaration level - whether it's single, partial, or full material declaration (FMD). Once you've set your criteria, you can send requests to one or multiple suppliers, whether they're experienced CDX members or newcomers.

Automated SVHC Reporting

CDX simplifies SCIP reporting by helping you quickly identify articles and complex products containing REACH Candidate List substances above 0.1% in your MDS. Unlike IMDS, CDX streamlines SCIP Bulk Upload integration, saving you from the time-consuming process of uploading items one by one and allowing you to use your resources more efficiently.

Effortless Document Exchange

In addition to IMDS features, CDX allows users to effortlessly upload essential documents, such as statements, Safety Data Sheets (SDS), self-certifications, third-party

certificates, special questionnaires, and more. Additionally, CDX includes a feature that prompts suppliers to attach necessary documents when responding to requests. This ensures that the data you receive is both complete and accurate.

Streamlining Responsible Sourcing

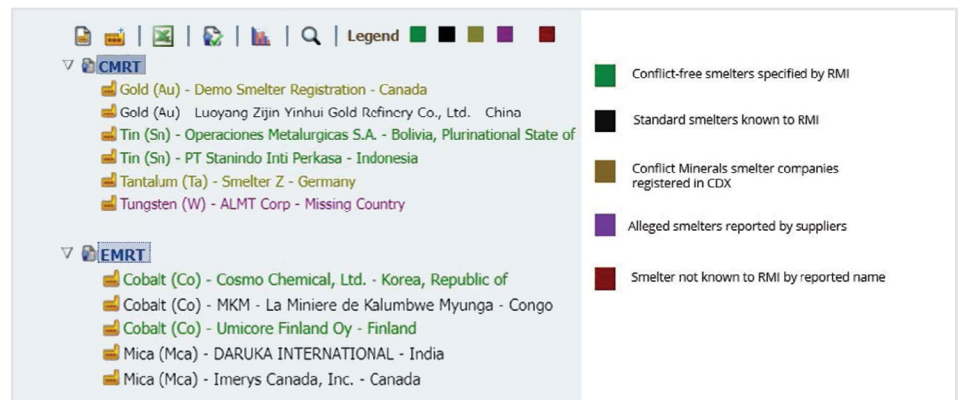

In response to the growing concern for responsible sourcing, businesses are realizing the need to validate their supply chain processes. The key to making this transformation lies in identifying questionable smelters and conducting due diligence. CDX's Responsible Materials Declaration (RMD) Manager streamlines this entire process, making it easy for you to gather information about the presence and sourcing of 3TG, Cobalt, and Mica with minimal effort, so that you can initiate dialogues with your suppliers and make decisions about the necessity of alternative sourcing options.

Integration with In-House Systems

CDX offers the capability to interface with external systems using the CDX Web Service. This service allows you to integrate data exchange between your internal system and the CDX platform. The CDX Web Service effectively maps all CDX functionalities, serving as the foundation for a exchange of material data with your in-house system.

Transparent Pricing

CDX provides straightforward and budget-friendly pricing through a single annual fee, eliminating the hassle of estimating costs. CDX offers additional support through an optional multi-tiered license model, allowing you to sponsor requests for your entire supply chain. This feature enables your suppliers to request data from their downstream supply chain without incurring extra costs. It streamlines reporting and encourages supplier engagement by allowing them to collect data using CDX for free.
